

Stik-II Products introduces PermaSTIK™ Glazing and SDL Mounting Tapes at GlassBuild America

FOR IMMEDIATE RELEASE: Easthampton, MA - August 2006

Stik-II Products, a manufacturer of pressure sensitive foam tape, will announce two PermaSTIK™ tapes at GlassBuild America, The Glass, Window & Door Expo taking place September 19 - 21 in Las Vegas.

PermaSTIK™ SDL Mounting Tape, a high strength tape for Simulated Divided Lite (SDL) mounting, offers aggressive adhesion for permanent bonding applications. Constructed with special polyolefin alloy foam that is uniquely crosslinked to promote the strength of the foam backing and improved adhesive anchorage to the foam, PermaSTIK™ SDL Tape is ideal for mounting interior and exterior window grilles.

PermaSTIK™ Glazing Tape offers a weatherproof seal between the window sash and the insulated glass unit with closed cell polyethylene foam that is coated with aggressive acrylic or rubber adhesive on both sides or differentially coated with acrylic and rubber adhesives.

"We've had proven success in the fenestration industry for more than 20 years with glazing and SDL tapes," says Mike Barrett, National Sales Manager.

Exceptional long-term aging characteristics, high tack on low surface energy substrates and resistance to U.V. light and temperature extremes are key features of both PermaSTIK™ tapes.

PermaSTIK™ SDL Mounting Tape bonds muntin bars made of wood, metal, vinyl and composite materials to glass. It is offered in gray, black and white in 1/32" and 1/16" thicknesses. PermaSTIK™ Glazing Tape, supplied with a poly liner for easy removal, seals glass in wood, vinyl and aluminum framing systems. PermaSTIK™ Glazing Tape is available in gray, black and white in 1/8", 3/32", 1/16" and 1/32" thicknesses.
