

Proven performance in window fabrication with PermaSTIK™ SDL Tape.

FOR IMMEDIATE RELEASE: Easthampton, MA - June 2006

PermaSTIK™, a high strength foam tape designed for Simulated Divided Lite (SDL) mounting by Stik-II Products, offers aggressive adhesion for permanent bonding applications. Constructed with special polyolefin alloy foam that is uniquely crosslinked to promote strength of the foam backing and improved adhesive anchorage to the foam, PermaSTIK™ SDL Tape is ideal for mounting interior and exterior window grilles.

"We've had proven success in the fenestration industry for more than 20 years with glazing and SDL tapes," says Mike Barrett, National Sales Manager. "PermaSTIK™ shadows extremely well, providing the clean sight line that window manufacturers look for in a muntin tape."

Exceptional long-term aging characteristics, high tack on low surface energy substrates, resistance to U.V. light and temperature extremes and high tensile and shear strength are key features of PermaSTIK™. The tape's high performance acrylic adhesive effectively bonds muntin bars made of wood, metal, vinyl and other plastics and composite materials to glass. PermaSTIK™ SDL Tape is offered in gray, black and white in 1/32" and 1/16" thicknesses.
